Response/Amendment dated June 14, 2006

Response to Office Action dated December 16, 2005

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1-44. (Cancelled)

(Previously Presented) A head end device for use in a hierarchical network, the device 45.

comprising a classifier connectable to a source of content and operable to place the content into

at least one of a plurality of hierarchically modulated simultaneously transmitted data streams

which respectively have a different priority assigned to the contents therein corresponding to a

particular class of the content.

(Previously Presented) A device as claimed in claim 45, wherein a classification of 46.

content is made in accordance with a data type of the content.

(Previously Presented) A device as claimed in claim 46, wherein the classifier is 47.

connectable to a data stream of content in the form of data elements and a splitter is connected to

the output of the classifier wherein the classifier identifies the data type of each element of the

data streams and inserts a marker into said data streams indicative of a priority assigned to the

element such that splitter subsequently places each data element, in accordance with the marker,

into a corresponding hierarchical transport stream for subsequent transmission by the network.

Response/Amendment dated June 14, 2006

Response to Office Action dated December 16, 2005

48. (Previously Presented) A device as claimed in claim 46, further including a connection

to a look-up table accessible in use by the classifier, the table comprising a set of profiles, each

profile including at least one definition of a priority for a particular data type wherein a selection

by the classifier of a particular profile for identifying the data type of each element is determined

by the network.

49. (Previously Presented) A device as claimed in claim 45, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criterion.

50. (Previously Presented) A method of transmitting content in a hierarchical network

comprising classifying content received for transmission and placing the content into at least one

of a plurality of hierarchically modulated simultaneously transmitted data streams which

respectively have a different priority assigned to the content corresponding to the classification

of the content.

51. (Previously Presented) A method as claimed in claim 50, including defining a data

stream for a particular classification.

52. (Previously Presented) A method as claimed in claim 51, including establishing a set of

profiles, each of which includes at least one definition of a data stream for a particular

classification wherein a selection of a particular profile is determined by the network.

Page 3 of 18

Response/Amendment dated June 14, 2006 Response to Office Action dated December 16, 2005

53. (Previously Presented) A method as claimed in claim 52, wherein the network

determines the selection of a profile on a basis of an intended recipient of the content.

54. (Previously Presented) A method as claimed in claim 52, wherein the network

determines the selection of a profile on the basis of a service providing said content.

55. (Previously Presented) A method as claimed in claim 52, wherein the network

determines the selection of a profile on a basis of network load.

56. (Previously Presented) A system for delivering content over a hierarchical network.

comprising a source of content deliverable, to a network, the network including head end

equipment operable to place content into at least one of a plurality of selected hierarchically

modulated data streams for simultaneous transmission by a transmitter, and a terminal operable

to receive the data stream, wherein the head-end equipment classifies the content and in

accordance with the classification places it into the corresponding hierarchically modulated data

streams for simultaneously transmission which respectively have a different priority assigned to

the content.

57. (Previously Presented) A system as claimed in claim 56, wherein the terminal provides a

return channel connectable, in use, to the network, such that a request for a delivery of content

may be originated by the terminal.

Page 4 of 18

Response/Amendment dated June 14, 2006

Response to Office Action dated December 16, 2005

58. (Previously Presented) A system as claimed in claim 56, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criteria.

59. (Currently Amended) A method of delivery of content to a terminal in a network having

a plurality of hierarchically modulated simultaneously transmitted data streams, the method

comprising receiving a request for the content, passing said request to a network gateway and

subsequently receiving content identified in the request in a form of at least one content element,

classifying the at least one content element, assigning a priority to the at least one content

element in accordance with the classification and assigning the content element to the

hierarchically modulated simultaneously transmitted data streams related to the priority assigned

to the content.

60. (Previously Presented) A method as claimed in claim 59, wherein a user identity is

identified from the request and a corresponding user profile is obtained in accordance with which

profile priority is assigned to the at least one content element.

61. (Previously Presented) A method as claimed in claim 59, wherein the request is received

in a return channel established by a terminal of a public land mobile network via a public

switched telephone network and the content element is delivered over a broadband broadcast

network.

Response/Amendment dated June 14, 2006

Response to Office Action dated December 16, 2005

62. (Previously Presented) A method as claimed in claim 59, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criteria.

63. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with the code to

carry out the method according to claim 59.

64. (Previously Presented) A program as claimed in claim 63, stored on a computer readable

medium.

65. (Previously Presented) A device as claimed in claim 47, further including a connection

to a look-up table accessible in use by the classifier, the table comprising a set of profiles, each

of which includes at least one definition of a priority for a particular data type wherein a

selection by the classifier of a particular profile for identifying a data type of each element is

determined by the network.

66. (Previously Presented) A method as claimed in claim 51, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criterion.

Page 6 of 18

Response/Amendment dated June 14, 2006

Response to Office Action dated December 16, 2005

67. (Previously Presented) A method as claimed in claim 52, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criterion.

68. (Previously Presented) A method as claimed in claim 53, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criterion.

69. (Previously Presented) A method as claimed in claim 54, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criterion.

70. (Previously Presented) A method as claimed in claim 55, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criterion.

71. (Previously Presented) A method as claimed in claim 51, wherein the network is a

terrestrial digital video broadcast network (DVB-T).

72. (Previously Presented) A method as claimed in claim 52, wherein the network is a

terrestrial digital video broadcast network (DVB-T).

Response/Amendment dated June 14, 2006

Response to Office Action dated December 16, 2005

73. (Previously Presented) A method as claimed in claim 53, wherein the network is a

terrestrial digital video broadcast network (DVB-T).

74. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with said code to

carry out the method according to claim 50.

75. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with said code to

carry out the method according to claim 51.

76. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with said code to

carry out the method according to claim 52.

77. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with said code to

carry out the method according to claim 53.

78. (Previously Presented) A system as claimed in claim 57, wherein said hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criteria.

Page 8 of 18

Response/Amendment dated June 14, 2006

Response to Office Action dated December 16, 2005

79. (Previously Presented) A method as claimed in claim 59, wherein said request is

received in a return channel established by a terminal of a public land mobile network via a

public switched telephone network and the content element is delivered over a broadband

broadcast network.

80. (Previously Presented) A method as claimed in claim 59, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criteria.

81. (Previously Presented) A method as claimed in claim 60, wherein the hierarchically

modulated simultaneously transmitted data streams are ranked in accordance with a

predetermined criteria.

(Previously Presented) A computer program comprising executable code for execution 82.

when loaded on a computer, wherein the computer is operable in accordance with the code to

carry out the method according to claim 59.

83. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with the code to

carry out the method according to claim 60.

Response/Amendment dated June 14, 2006

Response to Office Action dated December 16, 2005

84. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with the code to

carry out the method according to claim 61.

85. (Previously Presented) A method as claimed in claim 54, wherein the network is a

terrestrial digital video broadcast network (DVB-T).

86. (Previously Presented) A method as claimed in claim 62, wherein the network is a

terrestrial digital video broadcast network (DVB-T).

87. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with said code to

carry out the method according to claim 71.

88. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with said code to

carry out the method according to claim 54.

89. (Previously Presented) A computer program comprising executable code for execution

when loaded on a computer, wherein the computer is operable in accordance with said code to

carry out the method according to claim 55.
